1. Rated loads included in the charts are the maximum allowable freely suspended loads at a given boom length, boom angle and load radius, and have been determined for the machine standing level on firm supporting surface under ideal operating conditions. The user must limit or de-rate rated loads to allow for adverse conditions (such as soft or uneven ground, out-of-level conditions, wind, side loads, pendulum action, jerking or sudden stopping of loads, inexperience of personnel, multiple machine lifts, and traveling with a load).
2. Rated loads do not exceed 75% of minimum tipping loads. Rated loads based on factors other than machine stability such as structural competence are shown by an asterisk \* in the charts.
3. The machine must be reeved and set-up as stated in the operation manual and all the instruction manuals. If these manuals are missing, obtain replacements.
  - 1) The crane must be leveled to within 1% on a firm supporting surface.
  - 2) Boom backstops are required for all boom lengths.
  - 3) Gantry must be fully raised position for all operations.
  - 4) Crawlers must be fully extended and be locked in position.
4. Do not attempt to lift where no radius on load is listed as crane may tip or collapse.
5. Attempting to lift more than rated loads may cause machine to tip or collapse. Do not tip machine to determine rated loads.
6. Weight of hooks, hook blocks, slings and other lifting devices are a part of the total load. Their total weight must be subtracted from the rated load to obtain the weight that can be lifted.
7. To prevent the boom from leaning toward backward, the own weight of hook block attached to boompoint must be equal to or more than that of shown below.

Boom Length (ft)	50	60	70	80
Own weight of hook block (lbs)	6,000	3,800	2,500	1,900

8. When lifting over boom point with jib or auxiliary sheave, rated loads for the boom must be deducted as shown below.

Jib Length	Aux Sheave	30 ft	40 ft	50 ft	60 ft
Deduct (lbs)	700	7,055	8,010	8,965	9,920

9. The total load that can be lifted by the jib is limited by rated jib loads.
10. Boom lengths for jib mounting are 90 ft (27.4 m) to 250 ft (76.2 m).
11. The total load that can be lifted over an auxiliary sheave is the value for 700 lbs deducted from rated load for the boom without auxiliary sheave, but it should not exceed 59,000 lbs.
12. Boom lengths that can attach auxiliary sheave are from 50 ft (15.2 m) to 290 ft (88.4 m).
13. The boom should be erected over the front of the crawlers, not laterally. When erecting and lowering the boom at length of 290 ft (88.4 m) or over, the blocks for erection must be placed at the end of the crawlers.
14. Least stable position is over the side.
15. Maximum hoist load for number of reeving parts of line for hoist rope.

16. Lifting capacities listed apply only to the machine as originally manufactured and designed by KOBELCO CRANES CO.,LTD. Modifications to this machine or use of equipment other than that specified can reduce operating capacity.
17. Designed and rated to comply ANSI code B30.5.

*Operation of this equipment in excess of rated loads or disregard of instruction void the warranty.*
